The seminar aimed for emergency purpose consist of different models where user can send his/her present location on one click when there is emergency and received user can track that person and App also tell what steps should be taken at emergency time like road accident, heart attack etc, user can fetch lost phone contacts so on and many more features included.

## **Mini Project:**

- **School management System**

The Title of the project is School Management System to computerize the School. The Front end used is PHP and html. The Back End used is SQL Server. In this project there are several modules such as Data Entry module, Data Records module. These modules are further divided in to sub modules. That is Class Setup, Student Setup, Teacher Setup, Fees Setup, Student Attendance, Employee Attendance, Subject Setup, Add Expense, Expense Detail, Examination Setup and Exam Details are in Data Entry module. Student Details, Teacher Records, Student Attendance, Employee Attendance, Fees Records are in the Data Records module. These modules give way in managing the organization efficiently. So, this project helps in efficient management of human resource inside the organization. Also, it consumes less time consumption. The main and important benefit of this proposed system is that it is very much user friendly and accurate. So the employees and the administrators feel so much comfortable to work with it. Also in all the modules the regularly updated information are very much useful when they are extracted.
